

Construction by multilink blocks

You play this game in pairs. Every player gets 12 multilink blocks.

The blocks can be different colours, but the pair must have exactly same number of same colours.

Player A start to build from his or her own blocks a structure.

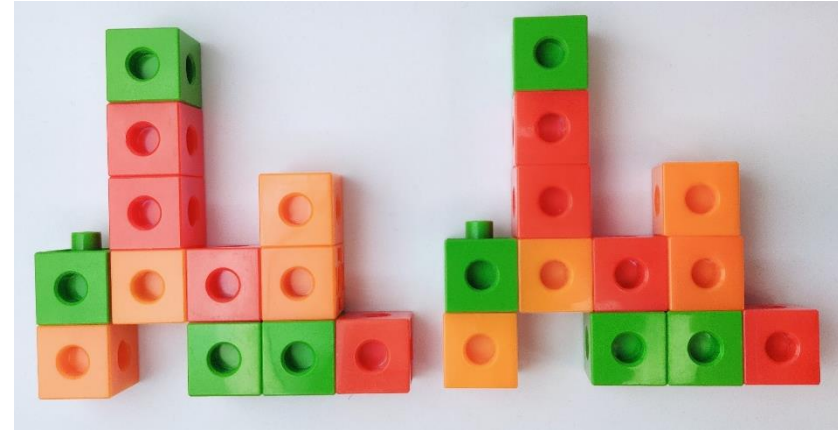

Construction by multilink blocks

When the structure is ready, starts the player A
explain the hole structure
step by step and player B
tries to follow the instruction.

When the players are ready
they compare each others structure
and talk about the process.

Players switch roles; Player b makes a structure and explains it to player A,
who is trying to follow the instructions.

In this game you learn to give instructions.

First you must decide from which block you start to give intrductions.

You also learn consepts on, below, right side, left side.

The game can be made more difficult by adding the block and build three-dimensional structures.

The game can be made more easy by playing it with less blocks.
